Advanced Java Programming

Lab Sheet 5 (Servlet and JSP, RMI and CORBA)

Objective: The main objective of this lab sheet is understanding the basic of GUI with JavaFX

1. Write a Servlet program that takes your name and address from a HTML Form and displays it on a web page.
2. Write a JSP program that outputs current time with good morning/afternoon text based on present time.
3. Write a JSP program that counts the number of times a link is clicked.
4. Create a login form and check if the username and password entered by the user are correct.
5. Write a simple JSP program to show the database connectivity. Your program should use insert, delete, select, and update operations.
6. WAP to create a client and server using RMI. The server should have methods to find the sum and difference of two numbers.
7. Write a simple CORBA program to implement client and server architecture. [Make necessary assumptions].
